The 360 Method: A Roadmap to Home Ownership Mastery

A clear, 9-step way to care for your home, from knowing it to building on it.

PHASE 1: AWARE (Know Before You Need)

Step 1: BASELINE

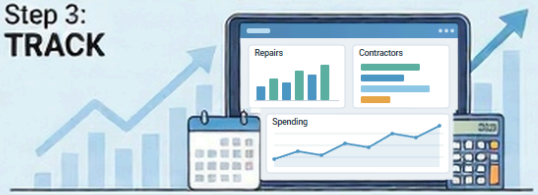

Document every major system, including HVAC age and roof condition, to create your home's medical record.

Step 2: INSPECT

Conduct seasonal walkthroughs to catch small issues like cracked caulk or loose trim before they become emergencies.

Step 3: TRACK

Maintain a living log of every repair, contractor, and dollar spent to reveal spending patterns.

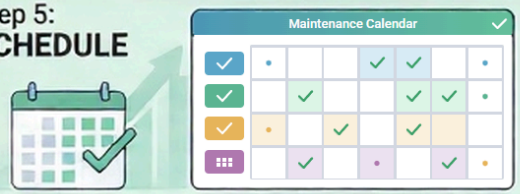

PHASE 2: ACT (Fix Small Before It's Big)

Step 4: PRIORITIZE

Use a three-tier system, NOW (safety), SOON (ROI), and WAIT (comfort), to stop wasting money on cosmetics.

Step 5: SCHEDULE

Build a complete maintenance calendar with monthly, quarterly, and annual tasks so nothing falls through the cracks.

Step 6: EXECUTE

Apply a DIY vs. Hire decision framework to gain the confidence to complete repairs efficiently.

PHASE 3: ADVANCE (Build Wealth Through Property Care)

Step 7: PRESERVE

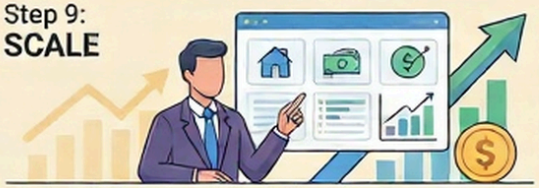

Implement system preservation routines to extend the lifespan of major appliances, like water heaters and HVACs.

Step 8: UPGRADE

Use the Good-Better-Best framework to ensure every improvement dollar increases property value or prevents failure.

Step 9: SCALE

Apply CFO intelligence to understand equity and evaluate refinance, mortgage, or investment decisions.
